

# Valmiki LMS — Manual Test Plan

Walk through every screen and flow, role by role. Tick **Pass** or **Fail** for each case. If something fails, write what you saw in Notes — the “Expected result” column is what it should have done, so the two together are enough to act on.

## 1 • Before you start

### Getting the app running

| Step               | Command / action                                          |
|--------------------|-----------------------------------------------------------|
| Load the demo data | <code>npm run db:seed</code> — safe to re-run at any time |
| Start the app      | <code>npm run dev</code>                                  |
| Open it            | <code>http://localhost:3000</code>                        |

**Re-seeding resets the testable states.** Recording a class uses up the one class that is waiting to be recorded. Run `npm run db:seed` again to put it back — it only recreates what is missing, so nothing is duplicated and nothing you added is deleted.

### Sign-in details — password for all accounts: `Valmiki@2026`

| Username            | Role    | What this account is for                                 |
|---------------------|---------|----------------------------------------------------------|
| <code>anjali</code> | Admin   | Everything — the school office view                      |
| <code>priya</code>  | Teacher | Maths & Science. Has classes and 3 missed class records  |
| <code>meera</code>  | Teacher | English. Has 1 record waiting to be written and 1 missed |
| <code>rohit</code>  | Teacher | Telugu. Has students but <i>no classes scheduled yet</i> |
| <code>ananya</code> | Parent  | One child (Aarav Sharma)                                 |
| <code>vikram</code> | Parent  | Two children (Diya Rao and Ishaan Rao)                   |

### The students in the demo data

| Student      | Subjects                               | Deliberately set up so you can test...       |
|--------------|----------------------------------------|----------------------------------------------|
| Aarav Sharma | Mathematics L3, English L2, Science L2 | A fully set-up child with a parent           |
| Diya Rao     | Mathematics L3, English L2, Telugu L1  | Telugu has <i>no teacher assigned</i>        |
| Ishaan Rao   | Telugu L1                              | A sibling — same parent account as Diya      |
| Kabir Singh  | Mathematics L3, Science L2             | A child with <i>no parent account</i> linked |

## 2 • Sign in and access rules

| ID      | What to do                                               | Expected result              | P / F | Notes |
|---------|----------------------------------------------------------|------------------------------|-------|-------|
| AUTH-01 | Sign in as <code>anjali</code> with the correct password | Lands on the Admin home page |       |       |

|                |                                                                                               |                                                                                     |  |  |
|----------------|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|--|--|
| <b>AUTH-02</b> | Sign in with a wrong password                                                                 | Refused. The message does not reveal whether the username exists                    |  |  |
| <b>AUTH-03</b> | Sign in with a username that does not exist                                                   | Exactly the same message as AUTH-02                                                 |  |  |
| <b>AUTH-04</b> | While signed in as <code>priya</code> , type <code>/admin</code> in the address bar           | Sent back to the teacher area. No admin screen appears                              |  |  |
| <b>AUTH-05</b> | While signed in as <code>ananya</code> , type <code>/admin/students</code> in the address bar | Sent back to the parent area                                                        |  |  |
| <b>AUTH-06</b> | Sign out from the bottom-left of the sidebar                                                  | Returns to the sign-in page. Going back in the browser does not restore the session |  |  |
| <b>AUTH-07</b> | Use "Forgot password" with any username                                                       | Same confirmation either way. An admin sees a reset request on their home page      |  |  |

### 3 · Admin — sign in as **anjali**

#### 3.1 Home and Needs Attention

| ID     | What to do                               | Expected result                                                                                                                                   | P / F | Notes |
|--------|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|
| ADM-01 | Look at the Needs Attention list on Home | Issues are grouped by cause, most serious first — red before orange before blue                                                                   |       |       |
| ADM-02 | Find the entry about Priya Sharma        | Says she <i>missed the deadline</i> on some class records, in red. Click “View 3 affected” to expand them                                         |       |       |
| ADM-03 | Find the entry about Meera Reddy         | Two separate entries: one <i>missed</i> (red) and one <i>outstanding</i> (orange). These mean different things — outstanding can still be written |       |       |
| ADM-04 | Read the “setup is incomplete” entries   | Each one names the exact gap, e.g. “Still needed: a class for Telugu.” Kabir Singh should name two subjects                                       |       |       |
| ADM-05 | Click “Review student” on one of them    | Opens that child’s profile                                                                                                                        |       |       |
| ADM-06 | Check the “Today” list at the bottom     | Class times read as normal school hours (e.g. 9:00 AM), not shifted by several hours                                                              |       |       |

#### 3.2 Adding a student

| ID     | What to do                                                             | Expected result                                                                                              | P / F | Notes |
|--------|------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|-------|-------|
| ADM-07 | Students → Add Student. Try to continue past step 1 with an empty name | The Next button stays disabled                                                                               |       |       |
| ADM-08 | Enter a name, date of birth and grade, then continue to Subjects       | Step 2 opens                                                                                                 |       |       |
| ADM-09 | Add two subjects and pick a level for each                             | A subject already chosen is not offered again in the second row                                              |       |       |
| ADM-10 | Add a subject but leave its level blank                                | Cannot continue until a level is chosen                                                                      |       |       |
| ADM-11 | Set weekly availability, then continue                                 | At least one day must be switched on                                                                         |       |       |
| ADM-12 | Fill in a parent name and username, continue to Review                 | The review lists the name, DOB, grade, <i>each subject with its level name</i> , availability and the parent |       |       |
| ADM-13 | Click Create Student                                                   | A temporary password is shown <i>once</i> , with a copy button                                               |       |       |
| ADM-14 | Close that box and look at the Students list                           | The new child appears with their subjects and levels                                                         |       |       |
| ADM-15 | Try creating another student using the <i>same</i> parent username     | Refused — that username is already taken                                                                     |       |       |

#### 3.3 Editing a student — open Diya Rao

| ID | What to do | Expected result | P / F | Notes |
|----|------------|-----------------|-------|-------|
|----|------------|-----------------|-------|-------|

|        |                                                                                    |                                                                                                            |  |  |
|--------|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|--|--|
| ADM-16 | Open Diya Rao from the Students list                                               | Profile opens on Overview: subject levels, weekly availability, parent access (with the parent's username) |  |  |
| ADM-17 | Manage Student → <b>Details</b> . Change the grade and save                        | Saves. The button reads "Saved". The change shows on the profile                                           |  |  |
| ADM-18 | Details → clear the name and try to save                                           | Save is disabled — a name is required                                                                      |  |  |
| ADM-19 | Manage Student → <b>Subjects</b>                                                   | Each subject shows with its current level in a dropdown                                                    |  |  |
| ADM-20 | <b>Add a subject the child does not have yet</b> , pick a level, save              | Saves. The new subject appears on the Overview tab                                                         |  |  |
| ADM-21 | Remove a subject (bin icon) — read the warning before saving                       | Warns that removing stops new classes for it but keeps everything already recorded                         |  |  |
| ADM-22 | Manage Student → <b>Availability</b> . Turn a day off and save                     | Saves. The Overview tab no longer lists that day                                                           |  |  |
| ADM-23 | Manage Student → <b>Parent</b> → "New account". Add a parent with a username, save | A temporary password is shown once. The parent is listed with their username                               |  |  |
| ADM-24 | Manage Student → Parent → "Existing account". Pick a parent already in the system  | Links without creating a second login — this is how siblings share one account                             |  |  |
| ADM-25 | Click "Reset password" next to a linked parent                                     | A new temporary password is shown once                                                                     |  |  |
| ADM-26 | Manage Student → <b>Status</b> . Read the three options                            | Active / Inactive / Archived, each explaining what it does. The current one is marked                      |  |  |
| ADM-27 | Set a test student to Archived, then look at the Students list                     | They disappear from the list. Their record is not deleted                                                  |  |  |

### 3.4 Assigning a student to a teacher — the Classes tab

This is the step that connects everything. Giving a child a subject does **not** put them in front of a teacher — a class does. Until then the teacher never sees them, no attendance is taken, and nothing reaches the parent.

| ID     | What to do                                                                                         | Expected result                                                                                 | P / F | Notes |
|--------|----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|-------|-------|
| ADM-28 | Open Diya Rao → <b>Classes</b> tab                                                                 | "Teachers & classes" lists Mathematics (Priya) and English (Meera) with days, time and duration |       |       |
| ADM-29 | Check the times shown there                                                                        | Read as normal school hours — Mon, Wed · 9:00 AM and Tue, Thu · 11:00 AM                        |       |       |
| ADM-30 | Look at "Subjects with no teacher yet"                                                             | Telugu L1 is listed: "Assigned to this child, but nobody is teaching it yet"                    |       |       |
| ADM-31 | Open <i>Ishaan Rao</i> → Classes tab                                                               | Also shows Telugu as unassigned                                                                 |       |       |
| ADM-32 | Now create a Telugu class (see 3.6), then return to Diya → Classes                                 | Telugu moves out of "no teacher yet" and into the list of classes                               |       |       |
| ADM-33 | Open Ishaan → Classes. Under Telugu, click " <b>Add to this class</b> " on the class you just made | Joins the existing class instead of creating a second one. It moves up into his class list      |       |       |
| ADM-34 | Click "Remove from class" on one of a child's classes                                              | Removed going forward. Attendance and records already written are untouched                     |       |       |
| ADM-35 | Try "Remove from class" on a class that has only one student left                                  | Refused, with a message to cancel the class from the schedule instead                           |       |       |

### 3.5 Curriculum

| ID     | What to do                                                         | Expected result                                                                | P / F | Notes |
|--------|--------------------------------------------------------------------|--------------------------------------------------------------------------------|-------|-------|
| ADM-36 | Curriculum → add a new subject                                     | Created with four levels (L1–L4) automatically                                 |       |       |
| ADM-37 | Add a heading under a level, then a sub-heading under that heading | Both save and show who added them and when                                     |       |       |
| ADM-38 | Assign that new subject to a student (3.3 ADM-20)                  | A subject created <i>after</i> a child was enrolled can still be given to them |       |       |
| ADM-39 | Remove a sub-heading a student has already been ticked against     | It is hidden, not deleted — the child's history survives                       |       |       |

### 3.6 Scheduling a class

| ID     | What to do                                                     | Expected result                                                                     | P / F | Notes |
|--------|----------------------------------------------------------------|-------------------------------------------------------------------------------------|-------|-------|
| ADM-40 | Schedule → Add class. Pick a student and choose <b>Telugu</b>  | The Teacher dropdown offers <i>only</i> teachers who can teach Telugu — Rohit Verma |       |       |
| ADM-41 | Change the subject to Mathematics without touching the teacher | The teacher choice clears itself, because Rohit cannot teach Maths                  |       |       |
| ADM-42 | Pick a subject nobody is assigned to teach                     | A message under the Teacher box says no teacher is assigned, and where to fix it    |       |       |

|        |                                                                                                     |                                                                                                                |  |  |
|--------|-----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|--|--|
| ADM-43 | Choose Telugu + Rohit, 2 times per week, 60 minutes, then Find Options                              | Valid time options appear, each with green ticks for capability, availability and no clashes                   |  |  |
| ADM-44 | Pick an option and confirm                                                                          | Class created. Rohit gets a notification                                                                       |  |  |
| ADM-45 | Now ask for something impossible — e.g. <b>5 times per week</b> for a teacher only free on two days | "No valid times found" <i>and a list of reasons</i> — it should name the actual blocker, not a generic message |  |  |
| ADM-46 | Look at the Schedule page for the week                                                              | Classes appear on the right days at the right times                                                            |  |  |
| ADM-47 | Cancel a single occurrence from the schedule                                                        | Only that one is cancelled. The rest of the weekly pattern is untouched                                        |  |  |

### 3.7 Teachers and accounts

| ID     | What to do                                                      | Expected result                                                                         | P / F | Notes |
|--------|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------|-------|-------|
| ADM-48 | Teachers → open Priya Sharma → Teaching tab                     | Her subjects and level ranges are listed and editable                                   |       |       |
| ADM-49 | Add a subject to a teacher's capabilities and save              | Saves. That teacher now appears when scheduling that subject (re-test ADM-40)           |       |       |
| ADM-50 | Set a capability where the "from" level is above the "to" level | Refused with a clear message                                                            |       |       |
| ADM-51 | Teacher profile → Availability → add a dated exception          | Saved. The normal weekly pattern is unchanged; only that date is affected               |       |       |
| ADM-52 | Deactivate a teacher, then check Admin Home                     | They cannot sign in and are not offered for new classes. Everything they recorded stays |       |       |
| ADM-53 | Reactivate that teacher                                         | A new temporary password is shown once                                                  |       |       |
| ADM-54 | Accounts page → "Reset password" on any user                    | New temporary password shown once                                                       |       |       |
| ADM-55 | Sign in as that user with the temporary password                | Forced to set a new password before anything else is reachable                          |       |       |
| ADM-56 | Notifications (bell icon)                                       | Lists the missed class-record alerts. Clicking one opens the class it is about          |       |       |

## 4 · Teacher — sign in as priya

| ID     | What to do                                                                  | Expected result                                                                                   | P / F | Notes |
|--------|-----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|-------|-------|
| TCH-01 | Look at Home                                                                | "Missed class records — 3 classes were never recorded", with the subject and date of each         |       |       |
| TCH-02 | Read the wording of that panel                                              | Explains the deadline passed, they can no longer be recorded, and the administrator has been told |       |       |
| TCH-03 | Check the times in "Today" and "Upcoming"                                   | Normal school hours — 9:00 AM, not shifted                                                        |       |       |
| TCH-04 | Open the Students page                                                      | Students are <b>grouped by subject</b> , e.g. "MATHEMATICS · 2 STUDENTS", each with their level   |       |       |
| TCH-05 | Open a student from that list                                               | Their profile opens. No "Manage Student" button — that is admin-only                              |       |       |
| TCH-06 | Try to reach a student Priya does not teach by pasting their URL            | Refused                                                                                           |       |       |
| TCH-07 | Curriculum → try to add a heading under a subject she teaches               | Allowed                                                                                           |       |       |
| TCH-08 | Curriculum → try to add a heading under a subject she does <i>not</i> teach | Not offered / refused                                                                             |       |       |
| TCH-09 | Schedule page                                                               | Shows only her own classes, not the whole school's                                                |       |       |

### 4.1 Students who have no class yet — sign in as rohit

| ID     | What to do                                                          | Expected result                                                                                    | P / F | Notes |
|--------|---------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-------|-------|
| TCH-10 | Open the Students page                                              | Shows "TELUGU · 2 STUDENTS" — Diya Rao and Ishaan Rao — even though Rohit has no classes           |       |       |
| TCH-11 | Look at the marker on each row                                      | Each shows an orange " <b>Not scheduled</b> " tag — they are his to teach, but no class exists yet |       |       |
| TCH-12 | Home page                                                           | No classes today, nothing due                                                                      |       |       |
| TCH-13 | After an admin schedules his Telugu class (ADM-44), reload Students | The "Not scheduled" tag is gone                                                                    |       |       |

## 5 · Recording a class — sign in as meera

A class is recorded **once**, and only between the class starting and **9:00 AM the next morning**. After that it counts as missed and cannot be written.

| ID | What to do | Expected result | P / F | Notes |
|----|------------|-----------------|-------|-------|
|----|------------|-----------------|-------|-------|

|        |                                                                                           |                                                                                                               |  |  |
|--------|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|--|--|
| REC-01 | Look at Home                                                                              | Both a "Class records due" list <i>and</i> a "Missed class records" panel                                     |  |  |
| REC-02 | Open the class under "Class records due"                                                  | Shows the students, what happened last time, and <b>the deadline</b> — "Record this class by 9:00 AM on ..."  |  |  |
| REC-03 | Click Start Class                                                                         | Step 1 of 4: Attendance                                                                                       |  |  |
| REC-04 | Try to continue without marking everyone                                                  | Continue stays disabled                                                                                       |  |  |
| REC-05 | Mark everyone Present, continue. Try to continue with an empty class note                 | Continue stays disabled — the class note is never optional                                                    |  |  |
| REC-06 | Write a class note and continue                                                           | Step 3: the coverage grid — sub-headings down the side, students across the top                               |  |  |
| REC-07 | Look at boxes already ticked                                                              | Anything covered in an earlier class is already ticked, so you only tick what is new                          |  |  |
| REC-08 | Tick one sub-heading for one student. Note down which one                                 | The box fills in                                                                                              |  |  |
| REC-09 | Continue to Review, then Save Class Record                                                | "Class Record Saved", listing what was applied — learning updates, observations, and that parents will see it |  |  |
| REC-10 | <b>Open the same class again</b>                                                          | "Already recorded" — the form is not offered a second time                                                    |  |  |
| REC-11 | Go back to Home                                                                           | That class is no longer under "Class records due"                                                             |  |  |
| REC-12 | Open a class from the "Missed" list                                                       | "Recording has closed", naming the deadline that passed. No form                                              |  |  |
| REC-13 | Open a class scheduled for a <i>future</i> date                                           | Start Class is disabled — "This class has not started yet"                                                    |  |  |
| REC-14 | Mark a student <b>Absent</b> in a new record, then try to write an observation about them | Nothing is recorded against an absent child                                                                   |  |  |
| REC-15 | Sign in as <b>anja1i</b> → Notifications                                                  | The missed-record alerts name the teacher, the subject and the date                                           |  |  |

## 6 · Parent — one child, sign in as **ananya**

| ID     | What to do                                                            | Expected result                                                             | P / F | Notes |
|--------|-----------------------------------------------------------------------|-----------------------------------------------------------------------------|-------|-------|
| PAR-01 | Look at Home                                                          | Aarav's card, with a <b>"Studying"</b> row listing each subject and level   |       |       |
| PAR-02 | Check the "Recently covered" card                                     | Lists work the teacher has ticked off, newest first, each marked "Covered"  |       |       |
| PAR-03 | <b>Cross-check with REC-08</b> — is the sub-heading you ticked there? | Yes. What the teacher records reaches the parent                            |       |       |
| PAR-04 | Learning tab → open the subject you ticked                            | That sub-heading is marked <b>Covered</b> ; the rest read "Not yet covered" |       |       |
| PAR-05 | Check the progress bar on that subject                                | The covered count matches what is ticked below                              |       |       |
| PAR-06 | Try to change anything on the Learning tab                            | Read-only. A parent cannot edit                                             |       |       |
| PAR-07 | Development tab                                                       | Areas with their current stage and the teacher's written evidence           |       |       |
| PAR-08 | Moments tab                                                           | Photos and videos, or a clear empty message                                 |       |       |
| PAR-09 | Check the whole parent area                                           | No schedule, no drafts, no other family's children anywhere                 |       |       |
| PAR-10 | Is a child switcher shown?                                            | <b>No</b> — Ananya has one child, so there is nothing to switch between     |       |       |

### 6.1 Parent with two children — sign in as **vikram**

| ID     | What to do                                             | Expected result                                                                 | P / F | Notes |
|--------|--------------------------------------------------------|---------------------------------------------------------------------------------|-------|-------|
| PAR-11 | Look at the top of Home                                | Two chips — Diya Rao and Ishaan Rao — with Diya selected                        |       |       |
| PAR-12 | Click <b>Ishaan Rao</b>                                | The card changes to Ishaan, 3rd Grade, studying Telugu L1                       |       |       |
| PAR-13 | Now go to the <b>Learning</b> tab                      | Still showing Ishaan — "Ishaan Rao's academic progress". The choice follows you |       |       |
| PAR-14 | Check Development and Moments too                      | Both show Ishaan, with the switcher available on each                           |       |       |
| PAR-15 | Switch back to Diya, then reload the page              | Still on Diya — the choice survives a reload                                    |       |       |
| PAR-16 | While the new child's data loads, look at the switcher | It stays on screen, so you can switch again without waiting                     |       |       |
| PAR-17 | Confirm Vikram cannot see Aarav or Kabir anywhere      | Only his own two children                                                       |       |       |

## 7 · The whole cycle, end to end

If you only have time for one test, do this one. It is the product in a single pass.

| ID     | What to do                                                                                                     | Expected result                                                                                | P / F | Notes |
|--------|----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|-------|-------|
| E2E-01 | <b>anjali</b> — add a new subject in Curriculum                                                                | Created with L1–L4                                                                             |       |       |
| E2E-02 | Add a heading and two sub-headings under L1                                                                    | Saved                                                                                          |       |       |
| E2E-03 | Give that subject to a teacher under Teachers → Teaching                                                       | Saved                                                                                          |       |       |
| E2E-04 | Open a student → Manage Student → Subjects → add the new subject at L1                                         | Saved. It shows on their Overview                                                              |       |       |
| E2E-05 | That student's Classes tab                                                                                     | The new subject appears under "Subjects with no teacher yet"                                   |       |       |
| E2E-06 | Schedule a class for it with that teacher, starting today                                                      | Created                                                                                        |       |       |
| E2E-07 | Sign in as that <b>teacher</b> → Students                                                                      | The child now appears under the new subject                                                    |       |       |
| E2E-08 | Once the class time has passed, open it from Home and record it — attendance, note, tick one sub-heading, save | Saved                                                                                          |       |       |
| E2E-09 | Sign in as that child's <b>parent</b>                                                                          | The sub-heading you ticked is under "Recently covered", and marked Covered on the Learning tab |       |       |
| E2E-10 | Back as the teacher — open that class again                                                                    | "Already recorded"                                                                             |       |       |

## 8 · Please don't report these — already known

- **A teacher can edit coverage for subjects they don't teach.** Opening any student they can see lets them tick any subject, not only their own.
- **The app is slow to load on first open.** The main bundle is about 1 MB; the database is hosted, so some screens take a second or two.
- **Moments are empty** in the demo data — uploading is untested here.
- **Weekly updates** have to be generated by an admin before a parent sees one, so "No weekly update yet" is expected on a fresh seed.
- **Web push notifications are off.** In-app notifications (the bell) are the only channel.
- **Voice recording / AI** is not built yet — the class record is typed by hand by design.

## 9 · Reporting something

For anything that fails, please note down:

1. The **case ID** (e.g. ADM-20) — or the screen, if it wasn't in this list.
2. Which **account** you were signed in as.
3. What you **expected** versus what actually happened.

4. A **screenshot** if the screen looked wrong.
5. Whether it happens **every time** or only once.

If a whole screen fails to load, press **F12** , open the **Console** tab, reload, and screenshot anything in red — that usually says exactly what broke.
