

FUNCTIONAL FLOW HANDBOOK

Every flow, step by step

What each person does, what the system does back, and where the flow ends — for the administrator, the teacher and the parent.

A

Access
4 flows

B

Admin
15 flows

C

Teacher
9 flows

D

Parent
7 flows

Contents

A	Getting in — first login, everyday login, forgotten passwords
B1–B3	Admin: school setup, curriculum, creating a teacher
B4–B7	Admin: teacher capability & availability, creating a student and parent
B8–B11	Admin: scheduling a class, the timetable, rescheduling, cancelling
B12–B15	Admin: Needs Attention, weekly updates, accounts, moments
C1–C9	Teacher: login, work queue, recording a class, updates, availability
D1–D7	Parent: login, home, weekly update, learning, development, moments
E	The chains — how the three roles hand work to each other

HOW TO READ A FLOW

ADMIN what the admin does **TEACHER** what the teacher does **PARENT** what the parent does **SYSTEM** what the app does

Each flow shows where it starts, the numbered exchange between person and system, where it ends, and any rule the system enforces regardless of what the screen allows.

SECTION A

Getting in

The same four flows serve all three roles. There is no email or SMS anywhere in them — accounts are handed over by a person.

A1 First-time sign-in

ANY USER

STARTS

A username and temporary password handed over by the admin

ENDS

Signed in, on the role's own home screen

- ANY USER** Open the app and enter the username and temporary password
No OTP, no email link, no verification code.
- SYSTEM** Resolve the username and sign in on the server
The username is mapped to an internal account alias and authenticated server-side. The browser never talks to the auth provider directly.
- SYSTEM** Detect that the password is still temporary
The session is issued, but every other screen and every other API route is closed until the password is replaced.
- ANY USER** Enter a new password and confirm it
- SYSTEM** Replace the password and clear the flag
- SYSTEM** Send the user to their own home
Admin ' Home. Teacher ' today's classes. Parent ' their child's summary.

/login

/change-password

BLOCKED Skipping the password change is not possible. It is enforced on the server, so navigating directly to any other URL still fails.

A2 Everyday sign-in

ANY USER

STARTS

The login screen

ENDS

The role's home screen

- ANY USER** Enter username and password
- SYSTEM** Authenticate and issue the session
- SYSTEM** Route by role
A teacher typing an admin URL is redirected back to their own home rather than shown an error page.

/login

RULE A wrong password and an unknown username produce the same message. Nothing reveals whether an account exists.

LIMIT Sign-in is limited to 30 attempts per 15 minutes.

A3 Forgotten password

ANY USER

SECTION B

Administrator flows

Setting the school up, keeping it running, and publishing to families.

Setting up

B1 **School setup, in order** **ADMIN**

STARTS	ENDS
Admin Home, on an empty or partly configured school	All four steps complete and the checklist disappears

SYSTEM

Show a four-step checklist on Home

Curriculum ' Teachers ' Students ' Schedule. The next incomplete step is highlighted; later steps are dimmed.

ADMIN

Press the highlighted step

Each step links straight to the screen that completes it.

SYSTEM

Tick the step off once real data exists

Completion is measured from the database, not from a “mark as done” button.

SYSTEM

Remove the checklist when all four are done

/admin

RULE The order is a dependency chain, not a suggestion. Scheduling needs students, students need levels, levels come from the curriculum.

B2 **Building the curriculum** **ADMIN**

STARTS	ENDS
Curriculum	Skills exist that a teacher can mark progress against

ADMIN

Add a subject

For example Mathematics or Sanskrit.

ADMIN

Open the subject and add its levels

The progression a child moves through. Their order matters — it is what teacher capability ranges are checked against.

ADMIN

Open a level and add topics

ADMIN

Open a topic and add skills

Skills are the smallest unit of progress and the only thing a student is actually assessed against.

ADMIN

Reorder or archive anything that changes

Reordering is available at every layer.

/admin/curriculum

/admin/curriculum/subjects/:id

/admin/curriculum/levels/:id

/admin/curriculum/topics/:id

RULE Nothing is ever deleted — items archive instead, so past records that reference them stay intact.

READ Teachers can read the curriculum (they pick skills from it during a class record) but only an administrator can change it.

Creating people

B3

Creating a teacher account

ADMIN

STARTS	ENDS
Teachers ' Add Teacher	The teacher can sign in; their profile is ready for capabilities

ADMIN

Press Add Teacher

A dialog opens: "This creates their sign-in account and a temporary password."

ADMIN

Type the full name

A username is suggested automatically from the first name and stays editable.

ADMIN

Confirm or change the username

Lowercase letters, numbers, dot, underscore and hyphen only.

ADMIN

Press Add Teacher

SYSTEM

Create three linked things at once

The sign-in account, the application user, and the teacher record — so there is never a half-created teacher.

SYSTEM

Show the username and temporary password once

With a one-press "Copy username and password" button, and the reminder that they will be asked to set their own password on first sign-in.

ADMIN

Hand the credentials over and press Done

/admin/teachers

ONE-TIME

 That password is displayed exactly once and can never be retrieved. If it is lost, use the reset flow (B14).

NEXT

 A new teacher shows "No subjects assigned yet". They cannot be scheduled until flow B4 is done.

B4

Setting what a teacher can teach, and when

ADMIN

STARTS	ENDS
Teachers ' the teacher's profile	The teacher becomes schedulable

ADMIN

Open the teacher from the list

ADMIN

Add a capability

A subject plus the minimum and maximum level they can teach, with an optional primary flag.

ADMIN

Set the weekly availability grid

Day of week plus a time window, repeating every week.

ADMIN

Add any dated exceptions

A specific date that overrides the weekly pattern — leave, a one-off session, a shifted window.

SYSTEM

Feed all three into the scheduling engine immediately

The next class search only offers slots this teacher can legitimately take.

/admin/teachers/:teacherId

RULE

 Capability is a hard constraint, not a note. A teacher without a matching capability is never offered for that subject or level.

SELF

A teacher may edit their own availability and exceptions. Capabilities stay admin-only, and no teacher can open another teacher's profile.

B5

Adding a student — and creating the parent account with it

ADMIN

STARTS

Students ' Add Student

ENDS

A schedulable child, and a parent who can sign in

- **ADMIN Step 1 · Basics**
Full name (required), date of birth, grade label. Next stays disabled until a name is entered.
- **ADMIN Step 2 · Subjects & levels**
Add each subject the child studies and pick their current level in it. At least one subject with a level is required — “A student needs at least one subject before they can be scheduled.”
- **ADMIN Step 3 · Weekly availability**
Pre-filled with Monday to Friday, 09:00–15:00, and adjusted from there. This is the boundary of possible times, not the timetable itself. At least one day must be enabled.
- **ADMIN Step 4 · Parent access**
Enter the parent's full name and username — the username is suggested from the name — and choose the relationship: Parent, Mother, Father or Guardian. This step is optional and can be completed later.
- **ADMIN Step 5 · Review**
Basics, subject levels, the availability grid and parent access on one screen before anything is written.
- **ADMIN Press Create Student**
- **SYSTEM Create the child, their levels, their availability — and the parent account**
If parent details were given, the parent's sign-in account is created and linked to this child in the same operation.
- **SYSTEM Show the parent's temporary password once**
A dialog titled “Parent account created”, with the same one-time display and copy button used for teachers.
- **ADMIN Hand the parent their credentials and press Done**

`/admin/students/new`

RESULT If no parent was entered, the flow lands directly on the new student's profile instead, and parent access can be added later from Manage Student.

RULE Creating the parent here is what grants a family access. Without a link to a child, a parent account can read nothing at all.

B6

Adding parent access to an existing student

ADMIN

STARTS

Student profile ' Manage Student

ENDS

The parent can sign in and see that child

- **ADMIN Open the child and go to Manage Student**
- **ADMIN Open parent access**
Either link an existing parent account or create a new one with a name, username and relationship.
- **SYSTEM Create or link the account and record the relationship**
- **SYSTEM Show the temporary password once if a new account was created**
- **SYSTEM Write the change to the student's history**
What changed, when, and who did it.

/admin/students/:studentId

RULE A parent can be linked to more than one child. Every parent screen resolves the active child rather than assuming there is only one.

B7 **Editing a student's configuration**

ADMIN

STARTS

Student profile ' Manage Student

ENDS

The change is live and recorded in history

-  **ADMIN Choose what to change**
Core details, subject levels, weekly availability, parent access, or status.
-  **ADMIN Edit and save**
Each area saves through its own action rather than one large form.
-  **SYSTEM Apply the change and record it in the student's history**
-  **SYSTEM Re-evaluate the schedule against the new state**
Narrowing availability can immediately surface an issue on Admin Home for classes that no longer fit.

/admin/students/:studentId

STATUS Students are set active, inactive or archived — never deleted. The record and its history survive.

The timetable

B8 Scheduling a class		ADMIN
STARTS	ENDS	
Schedule ' Schedule a class	A recurring class on everyone's timetable	
ADMIN Select the students One or many, by tick box. A class can hold a single child or a group. ADMIN Choose subject and level The level defaults to the first selected student's current level in that subject. ADMIN Choose a teacher, or leave it open Leaving it as "Any capable teacher" lets the system search across everyone qualified. ADMIN Set frequency, duration, time preference and start date 1–5 times per week · 30, 45, 60 or 90 minutes · morning, afternoon or any time · start date defaults to today. ADMIN Press Find Options SYSTEM Search for slots that satisfy every constraint at once Teacher capability AND teacher availability AND every selected student's availability AND no clash with anything already booked. SYSTEM Return the valid options, ranked Each option shows the days, the time, the teacher, a green tick per satisfied constraint, and a "Best match" badge on the strongest one, which is pre-selected. ADMIN Pick an option and press Confirm & Save Or "Choose a different option" to go back and change the request. SYSTEM Create the class and expand it into weekly occurrences Each occurrence is a real, individually cancellable and recordable session. SYSTEM Confirm and notify "Class scheduled" — the class now appears for everyone involved, the teacher has been notified, and availability has been validated.		
/admin/schedule/new		
RESULT Only genuinely valid times are ever offered, so a confirmed class cannot conflict at the moment it is created.		
NO MATCH If nothing satisfies all four constraints the screen says so plainly and suggests what to change: a different duration, fewer sessions per week, or wider availability. It never offers an invalid slot as a fallback.		
B9 Reading the timetable		ADMIN
STARTS	ENDS	
Schedule	Knowing what is on and when	
ADMIN Open Schedule The current week loads by default. ADMIN Move between weeks, or jump back with Today		

- ADMIN** **Switch between week and day view**
Desktop shows the week as a grid; a phone shows a day-oriented agenda, because a seven-column grid does not survive being shrunk.
- ADMIN** **Open a class to see its roster and record**

/admin/schedule

B10 Rescheduling affected classes

ADMIN

STARTS

A Needs Attention card ' Resolve

ENDS

The affected classes moved to valid times

- ADMIN** **Press Resolve on the issue**
The link carries the exact affected classes, so the screen opens pre-loaded rather than empty.
- SYSTEM** **Propose a new time for each affected class**
Checked against teacher capability, both availabilities and existing bookings — the same engine that created them.
- ADMIN** **Review every old and new time on one screen**
Any class with no valid alternative is listed with the reason rather than quietly dropped.
- ADMIN** **Apply the whole set**
- SYSTEM** **Revalidate each move again before applying it**
A proposal that has become invalid since it was generated is skipped, not forced through.
- SYSTEM** **Report how many moves actually landed and notify the teachers**

/admin/schedule/reschedule

RULE Nothing moves invisibly. The administrator sees every change before it happens and confirms the set as one deliberate action.

DIRECT Opening the reschedule screen with no classes selected explains where to start: a Needs Attention issue on Home.

B11 Cancelling a single class

ADMIN

STARTS

Schedule ' the occurrence

ENDS

The class is cancelled and the teacher knows

- ADMIN** **Open the occurrence and choose to cancel**
- ADMIN** **Give a reason**
- SYSTEM** **Mark that occurrence cancelled**
Only that one session — the rest of the recurring class is untouched.
- SYSTEM** **Notify the teacher**

QUIET Parents are not messaged about scheduling changes. Their one message a week is the weekly update, and nothing else.

Running the school

B12

Working through Needs Attention

ADMIN

STARTS

Admin Home, each morning

ENDS

The board is clear

SYSTEM

Recompute every issue from current state

Nothing is stored, so an issue disappears the moment its cause is fixed. The window looks 14 days ahead.

SYSTEM

Group by root cause

One cause is one card. Three classes broken by one teacher's absence read as "Priya is unavailable · 3 classes affected", not three separate warnings.

SYSTEM

Order by severity

Danger first, then warning, then information.

ADMIN

Open a card to see the affected records

ADMIN

Press the action

Each card links to the screen that fixes it, carrying the context with it.

/admin

DETECTS

Teacher unavailable for a booked class · two classes overlapping · a student booked outside their availability · class records still outstanding · a student missing levels or availability · a password reset waiting.

B13 Generating and publishing weekly updates

ADMIN

STARTS

Weekly updates, at the end of the week

ENDS

Families have their one message of the week

-  **ADMIN Press Generate this week**
Builds a draft for every student in one action; individual students can be regenerated on their own.
-  **SYSTEM Assemble each child's week from approved records only**
Learning changes, development observations, class notes and moments from that week — drawn strictly from records a teacher has saved.
-  **SYSTEM Write a “week at a glance” summary**
Deterministic template assembly, not a generated narrative.
-  **ADMIN Open a draft and review it**
-  **ADMIN Press Review & publish**
-  **SYSTEM Publish, and send the parent their single notification**
Only now does the update become visible on the parent side.

/admin/weekly-updates

NEVER Nothing auto-publishes. Publishing is the one moment a family hears from the school all week, so it is always a human action.

REDO Regenerating replaces the contents but keeps the same update, so a link a parent already has never breaks.

B14 Administering accounts

ADMIN

STARTS

Accounts

ENDS

Access granted, changed or withdrawn

-  **ADMIN Open Accounts**
Every administrator, teacher and parent, with role, status, and whether they still hold a temporary password.
-  **ADMIN Create an account**
Username, full name and role.
-  **ADMIN Reset a password**
Shown once in the same one-time dialog, titled “Password reset”.
-  **ADMIN Change a status**
Active, inactive or archived — an inactive account cannot sign in and stops receiving notifications.

/admin/users

B15 Adding a moment

ADMIN

STARTS

Moments

ENDS

A photo or video with context, visible to the right families

-  **ADMIN Choose a photo or video**

- SYSTEM **Issue a one-time signed upload address**
- SYSTEM **Upload straight to private storage**
The file never passes through the application server.
- ADMIN **Add a title, caption and the students in it**
- SYSTEM **Save it and make it visible to those students' families**

/admin/moments

RULE Media is served through short-lived signed links issued only after a permission check, so a copied URL does not become a permanent public one.

SECTION C

Teacher flows

A deliberately narrow surface. A teacher has one job in this product, and the app is shaped around doing it quickly on a phone between classes.

C1 Teacher first login

TEACHER

STARTS

Credentials handed over by the administrator

ENDS

Standing on today's work queue

-  **TEACHER** Sign in with the username and temporary password
 -  **SYSTEM** Require a new password before anything else opens
 -  **TEACHER** Set their own password
 -  **SYSTEM** Land them on Teacher Home
- Not a general calendar — the day's work queue.

/login

/change-password

/teacher

C2 Starting the day

TEACHER

STARTS

Teacher Home

ENDS

Knowing exactly what to do next

-  **SYSTEM** Show anything outstanding first
 - "Class records due" — classes that have finished with no saved record. The section only appears when there is something in it.
-  **SYSTEM** Then today's classes
 - Time, subject, level and who is in it.
-  **SYSTEM** Then the rest of the week
 - Falling back to "You're all caught up" when there is nothing left.
-  **TEACHER** Tap a class to open its record

/teacher

C3 Checking their own schedule

TEACHER

STARTS

Schedule

ENDS

Their week, and nobody else's

-  **TEACHER** Open Schedule
-  **SYSTEM** Return only classes assigned to this teacher
 - Scoping happens on the server from the signed-in identity, so there is no view to widen and no filter to bypass.

/teacher/schedule

STARTS

Tapping a class from Home

ENDS

Ready to teach, with continuity from last time

- SYSTEM

Show the class header
Subject, level and the time window.
- SYSTEM

List the students with photos
- SYSTEM

Show the note from the last recorded class with this same group
Continuity without digging through history. If there is none it says so: "This is the first recorded class with this group."
- TEACHER

Press Start Class

/teacher/class/:occurrenceId

C5

Recording a class

TEACHER

STARTS

Start Class

ENDS

One saved record that updates the child's whole file

SYSTEM Open a four-step full-screen flow

Attendance ' Class Note ' Updates ' Review. No navigation bar competes with it while a teacher is typing.

TEACHER Step 1 · Mark attendance

Present, Absent or Late for each child, as large tap targets.

SYSTEM Hold the flow until every student is marked

"Nothing can be recorded about a child who was not there."

TEACHER Step 2 · Write the overall class note

What was covered and how the group responded. This one is always required.

TEACHER Step 2 · Optionally add a note per student

Only students marked present are listed.

TEACHER Step 3 · Optionally add learning updates

Student, skill, and the new status: To learn, Learning, Needs support, or Mastered. Skills come from the level this class actually teaches.

TEACHER Step 3 · Optionally add development observations

Student, development area, and what was observed in their own words.

TEACHER Step 4 · Review everything on one screen

Attendance, the class note, each observation, each learning change and each development note before anything is written.

TEACHER Press Save Class Record**SYSTEM** Write it all in a single operation

Attendance, the note, observations, learning changes and development evidence land together, or none of them do.

SYSTEM Confirm exactly what happened and where it went

"Class note saved to this class's history · N learning updates applied to the Learning Map · N development observations added · Parents will see this in their next weekly update."

`/teacher/class/:occurrenceId`

RULE

Step 3 is genuinely optional. A single class does not have to produce learning or development data, and the screen says so rather than nudging a teacher into inventing progress.

EN-

FORCED

Anything recorded against a student marked absent is discarded by the server, whatever the screen allowed. The class note cannot be empty. A record can only be saved once.

FANS OUT

One save updates the class history, the child's learning map, their development evidence, and the material their next weekly update will be built from.

C6

Updating a skill outside a class

TEACHER

STARTS

Student profile ' Learning

ENDS

The learning map reflects reality

- **TEACHER** Open a student they teach
- **TEACHER** Find the skill on the learning map and set a new status
- **SYSTEM** Record the change with its previous value and its author

Tagged as a manual update rather than one from a class record, so the origin of every change stays visible.

/teacher/students/:studentId

C7 Adding a development observation outside a class

TEACHER

STARTS

Student profile ' Development

ENDS

Evidence added under the right area

- **TEACHER** Open the student and choose a development area
- **TEACHER** Write what was observed
- **SYSTEM** Append it as evidence
Observations are only ever added, never overwritten.
- **TEACHER** Optionally set the stage for that area
Emerging, Developing or Consistent — a separate, deliberate judgement rather than something a single observation moves automatically.

/teacher/students/:studentId

C8 Marking themselves unavailable

TEACHER

STARTS

Their own teaching profile

ENDS

The administrator sees the consequence immediately

- **TEACHER** Add a dated exception for the day they cannot teach
- **SYSTEM** Override the recurring pattern for that date only
- **SYSTEM** Re-evaluate every class already booked in that window
- **SYSTEM** Raise one grouped issue on Admin Home
"[Teacher] is unavailable · N classes affected", with a Resolve action that opens the reschedule proposal pre-loaded.

RULE The teacher does not have to tell anyone. Marking the exception is the notification.

C9 Looking at a student

TEACHER

STARTS

Students

ENDS

The full picture for a child they teach

- **SYSTEM** List only students in this teacher's own classes
- **TEACHER** Open a child
Learning map, development picture, moments and class history.

SYSTEM

Refuse anything outside that set

"This student is not in any of your classes." Administrative controls are not shown at all.

/teacher/students

/teacher/students/:studentId

SECTION D

Parent flows

Entirely read-only. A parent sees a concise picture of their own child, and is asked to come back for exactly one thing a week.

D1 Parent first login

PARENT

STARTS

Credentials handed over by the school

ENDS

Their child's summary

-  **PARENT** Sign in with the username and temporary password
-  **SYSTEM** Require a new password first
-  **PARENT** Set their own password
-  **SYSTEM** Land on Parent Home

/login

/change-password

/parent

RULE

The account was created either during the child's setup (B5) or added afterwards (B6). Without a link to a child it can read nothing.

D2 Parent Home

PARENT

STARTS

Signing in

ENDS

A summary, with a way into everything deeper

-  **SYSTEM** Show the child's card
Photo, name and grade.
-  **SYSTEM** Show "This week"
The weekly update when one is ready, with the week it covers and a View button. Otherwise: "Your first weekly update will arrive once classes have been recorded."
-  **SYSTEM** Show Learning now
The skills currently in play with their status, linking through to the full learning section.
-  **SYSTEM** Show a development snapshot
Each area with its current stage.
-  **SYSTEM** Show the most recent moment
A photo with its date and subject, linking to the full gallery.

/parent

ABSENT

There is no schedule and no draft anywhere on the parent side. Nothing appears here that a teacher has not approved.

D3 Reading the weekly update

PARENT

STARTS

The notification, or the card on Home

ENDS

The week understood — and downloadable

- **SYSTEM** Send exactly one notification when it is published
- **PARENT** Open the update
- **SYSTEM** Show “This week at a glance”
A short written summary of the week.
- **SYSTEM** Show learning and development highlights side by side
Plus the teacher’s note when there is one.
- **PARENT** Move between the four tabs
Overview · Learning · Development · Moments, each showing how many items it holds.
- **PARENT** Press Download PDF
- **SYSTEM** Build the document in the browser and download it
From the same data the screen is showing, so the PDF and the portal cannot disagree. The filename sorts chronologically so it survives a shared family folder.

/parent/weekly-updates/:updateId

RULE Everything here was already saved and approved by a teacher. A parent never sees a draft.

D4 Browsing learning

PARENT

STARTS

Learning

ENDS

Where their child is in every subject

- **PARENT** Open Learning
- **SYSTEM** Show the same learning map the school uses, with editing switched off
One implementation rather than two that could drift apart.
- **PARENT** Drill into a subject to see topics and individual skills

/parent/learning

D5 Browsing development

PARENT

STARTS

Development

ENDS

The current picture and the evidence behind it

- **PARENT** Open Development
- **SYSTEM** Show each area with its stage
Emerging, Developing or Consistent.
- **PARENT** Open an area to read the actual teacher observations behind it
Evidence and context rather than a score.

/parent/development

RULE Read-only. Stages are the school’s judgement to make.

D6

Browsing moments

PARENT

STARTS	ENDS
Moments	A visual history of their child's experiences

PARENT

Open Moments

SYSTEM

Show photos and videos of this child only

With the title, date and the class each came from.

/parent/moments

SCOPED

A parent sees media tagged to their own child. Nothing from another family is reachable, including by guessing a link.

D7

More than one child

PARENT

STARTS	ENDS
Any parent screen	The right child in view

SYSTEM

Resolve which children this account is linked to

PARENT

Switch between them

SYSTEM

Re-check the link on every single request

Holding the parent role grants nothing on its own — only the link to that specific child does.

SECTION E

The chains

Where the three roles hand work to each other. These are the paths that make it one system rather than three apps.

E1 · Getting a person into the system

The same chain creates teachers (B3) and parents (B5, B6), and the same chain recovers a forgotten password (A3) — the request simply arrives as an issue on the administrator's Home instead of a new-account decision.

E2 · A teacher becomes unavailable

No message is sent and no meeting is needed. The teacher records the fact, the system works out the consequence, and the administrator resolves it in two presses with every change visible before it happens.

E3 · A class becomes a family's weekly story

Three deliberate human gates stand between a class and a parent: the teacher's save, the administrator's review, and the administrator's publish. Nothing crosses to a family automatically, and nothing unapproved is even eligible.

E4 · A class goes unrecorded

The same fact surfaces to the person who can fix it and the person accountable for it, and it clears from both the moment it is resolved — because the issue is recomputed rather than stored and ticked off.

Who can reach what

A Curriculum

Admin writes · teacher reads · parent never sees it

B	Students	Admin: all · teacher: only their own classes · parent: only their own children
C	Schedule	Admin: the school · teacher: their own week · parent: no schedule at all
D	Class records	Teacher writes their own · admin may open any · parent sees the outcome, never the record
E	Learning & development	Admin and teacher write in scope · parent reads only
F	Moments	Admin and teacher upload · parent sees only their own child
G	Weekly updates	Admin generates and publishes · parent reads published only
H	Accounts	Admin only

ONE RULE UNDERNEATH ALL OF IT

Every restriction described in this handbook is applied on the server, inside the query that fetches the data. What each role sees on screen is a convenience so nobody walks into a dead end — it is never the thing keeping anyone out.
